DESN 27425 Interaction Design: Modeling and Materials
Module 2

Design Challenge 1: Campus Spatial Data Exploration Research

Instructions:

Follow the steps below as an introduction to this weeks Design Challenge:

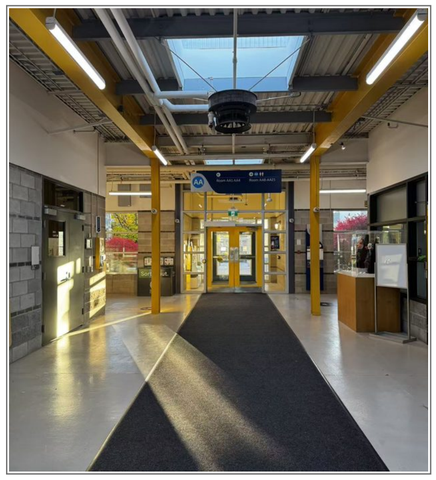

Step 1: In groups of 3 - 4 starting from AA1A and a campus map: Explore and document locations throughout the campus. As you search different areas explore places you haven't seen yet. Also consider that some areas may be resolved, some have functional or structural issues, some just need some aesthetics. Document everything.

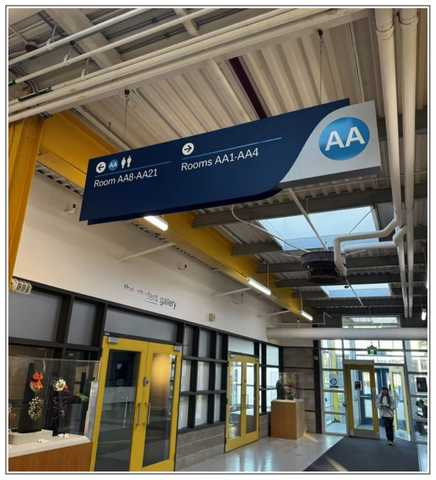

Step 2: Stretching your visualization skills: Without getting too invested in any one location or concept try to visualize how our project paths can be applied as you explore. Take notes to keep track of your ideas.

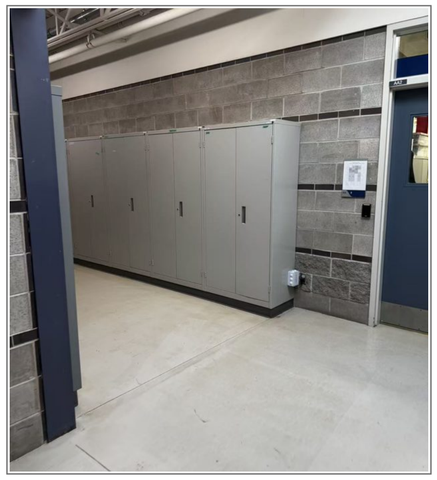

Step 3: Theories:
Using the **Spatial Workshop** consider how the theories we've examined and started researching apply to the campus, the locations, and the concepts you may be developing already.

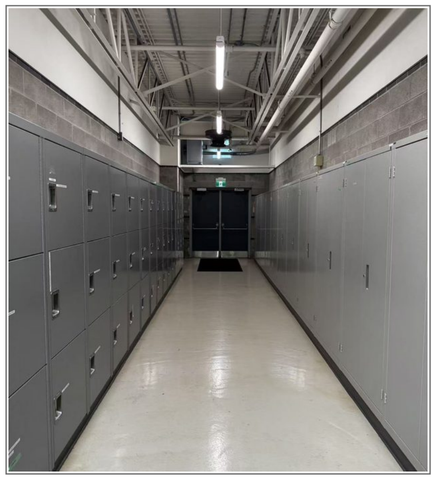

Step 4: Design Challenge Documentation:
From the pool of images documenting this Design Challenge exploration and the Spatial Data Workshop select 25 of the best images, add them to the table below and:

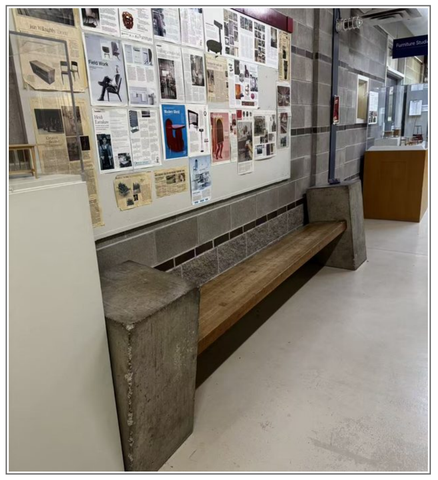

1 Add them to the Grid below and submit this Design Challenge page as a pdf to SLATE.
2. Add images, videos/links GIFs representing your Design Challenge 1 on your Phoenix website.
